This is a simple, non-technical guide for sales, ops, and onboarding teammates. For full details, see [user-guide.md](#).

What Fretbox Outreach AI Does

- Discovers Indian universities (UGC list + IITs / NITs / IIITs).
 - Researches each university automatically with AI.
 - Drafts personalized outreach emails and holds them for your approval.
 - Tracks replies, classifies intent, and auto-replies when appropriate.
 - Generates rich HTML proposals and books meetings with Google Meet links.
-

Daily Workflow (10–20 Minutes)

1. Open **Universities** and click **Sync All UGC Universities** or **Sync IITs / NITs / IIITs** if you need fresh leads.
 2. Go to **Enrichment**, select a small batch, and click **Run Deep Enrichment**.
 3. Go to **Outreach**, find universities in **Ready to Sequence**, and click **Begin Sequence**.
 4. (Optional) Click **Document Mailer** to upload a `.docx`, choose recipients (stakeholder or custom email per university), attach the original and/or extra `.docx` files, and create drafts for approval.
 5. Go to **Approvals** and review AI-drafted emails.
 6. Use **Approve & Send** (or **Edit** first) to send outreach.
 7. Check **Analytics** for opens, clicks, bounces, replies, and funnel movement.
-

Before You Start

Go to **Settings** → **API Keys** and add:

Setting	Why it matters
Google Gemini	Powers all AI reasoning and content.
Serper	Searches and discovers university websites and news.
Firecrawl	Crawls websites and extracts contacts.
ZeptoMail Email API	Sends every outbound email.
ZeptoMail From Email	Verified sender address (default: <code>outreach@fretbox.in</code>).
ZeptoMail Sender Name	Display name (default: <code>Ashish Gupta (Fretbox)</code>).
Google Calendar Service Account + Calendar ID	Optional; needed for Meet links and calendar invites.

Each key can be **saved, tested, and removed** independently.

Universities Page

- **Tabs:** All, Central, State, Private, Deemed, Other.
- **Search:** Type at least 2 characters; results update after a short pause.
- **Actions:**
 - **Validate Websites** — checks which sites are valid/discoverable/invalid.
 - **Sync All UGC Universities** — imports the government list.
 - **Sync IITs / NITs / IIITs** — seeds Institutes of National Importance.
 - **Upload CSV** — import your own list; duplicate names are skipped.
- Click a row to open the detail panel with demographics, stakeholders, and AI signals.

Enrichment

- Three columns: **Pending / New, In Progress, Enriched**.
- Select universities, then click **Run Deep Enrichment**.
- The AI runs discovery, scraping, social/news discovery, government data, deep enrichment, and scoring.

- The result is a **lead tier** (High / Medium / Low) and a **priority score**.

Outreach Pipeline

Column	Meaning
Ready to Sequence	Ready for first outreach.
Outreach Active	Emails are being sent.
Replied	Contact responded.
Meeting Booked	Meeting scheduled via Proposals.
Not Interested	Declined or opted out.

- Click **Begin Sequence** to start a 4-step email sequence.
- The first email is drafted and placed in **Approvals**.
- You can move a card back a step or skip it entirely.

Document Mailer

Use this when you want to send a `.docx` document to one or more universities instead of (or alongside) the automated sequence:

1. On **Outreach**, click **Document Mailer**.
2. Upload the main `.docx`. Its text is extracted and shown as the editable email body.
3. Choose whether to also attach the original `.docx`.
4. Add extra `.docx` attachments if needed.
5. Select one or more universities and, for each, pick a stakeholder or enter a custom email.
6. Click **Create drafts**. Each draft goes to **Approvals** for review before it is sent.

Approvals (Human-in-the-Loop)

- Every email is reviewed here before sending.

- **Approve & Send** — sends it immediately.
 - **Edit** — change the subject or body, then save and approve.
 - **Reject** — deletes the draft and pauses the sequence.
 - **Approve All** — sends every pending draft at once.
-

Proposals

- **Generate Proposal** manually, or a draft is created automatically when a `meeting_request` reply arrives.
 - **Statuses: Draft, Ready, Sent, Meeting Confirmed, Cancelled.**
 - Click **Preview & Send** to edit content, choose recipients/CC, and send the rich HTML proposal.
 - Click **Confirm Meeting & Create Meet Link** to pick a time (15–60 min) and generate a Google Calendar event with a Meet link.
 - You can also **Reschedule** or **Cancel** a confirmed meeting.
-

Replies

The system automatically classifies replies:

- `meeting_request` — creates a draft proposal; moves to **Meeting Booked**.
- `positive_interest` — continues follow-up.
- `request_info` — sends details.
- `not_interested` / `opt_out` — stops outreach; moves to **Not Interested**.
- `out_of_office` — retries later.
- `other` — stays for manual review.

Auto-replies are sent for `meeting_request`, `positive_interest`, and `request_info`. Low-confidence high-stakes replies are held for human review.

Analytics

- **Outreach Funnel** — counts at each major stage with conversion rates.

- **Key Metrics** — Reply Rate, Meeting Rate, High/Medium Tier Leads, Not Interested.
 - **Email Performance** — Sent, Opened, Open Rate, Clicked, Bounced for each of the 4 sequence steps.
 - **Reply Intent Breakdown** — how replies are classified.
-

Email Tracking

Every sent email is tracked via the ZeptoMail `request_id`. Webhooks update statuses as the email is delivered, opened, clicked, or bounced. These stats feed Analytics and the Outreach timeline.

Password Reset

1. Click **Forgot password?** on the Sign In page.
2. Enter your email and click **Send reset code**.
3. Paste the code from your email and choose a new password (min 8 characters).
4. Reset codes expire in 1 hour.

If you do not receive a code, ask the tech team to check the **ZeptoMail** settings.

If Something Looks Wrong

1. Check **Settings** for missing or expired API keys.
2. Check **Approvals** for unsent drafts.
3. Check **Analytics** for bounces and failures.
4. Check **Outreach** for unclassified replies.
5. Check the **University detail view** — the university needs a valid website and at least one stakeholder email before outreach can start.

For step-by-step instructions, see the full [user-guide.md](#).
